Wisconsin Trapping Matters Workshop

Wildlife students and professionals often shy away from trapping-related discussions because of its potential to be a controversial wildlife management technique. Yet it is essential that folks dedicated to the wildlife profession understand how regulated trapping provides environmental & social benefits. This workshop is intended to help participants understand & better communicate the benefits of regulated trapping to wildlife management. Participants will leave with scientifically sound information & be trained in skills that will make them effective communicators on this important subject.

Date: Likely in late September
Location: To be determined (likely in central WI)
Registration: More details to come soon.

This workshop will consist of 3 main sections:

- 1. Communication Skills:**
 - The importance of human dimension studies & messages related to regulated trapping
 - How the media works & what they expect of you in an interview situation
 - How you can use media to educate the public & key messages to use about regulated trapping
 - Open dialog & hands-on activities to develop & improve communication skills and make the experiences interactive
- 2. Traps & Trapping Techniques**
 - Hands-on demos of trap types and how they work
 - Variety of outdoor trap stations highlighting humane and selective techniques
- 3. Best Management Practices for Trapping & Furbearer Management**
 - History and research behind humane trapping, and how and why regulated trapping is used in furbearer management and wildlife management

Workshop qualifies for 7 credit hours (Category 1) towards TWS certification & professional development.

*A thing is right when it tends to preserve the integrity, stability and beauty of the biotic community.
It is wrong when it tends to do otherwise. – Aldo Leopold*

President's Soapbox

By Jason Riddle

Dear Wildlifers,

Put this down and get the heck outdoors. Seriously, stop reading my ramblings and get outside. At least, this is how I've been feeling lately. Oddly, I think it is related to some new responsibilities.

I recently agreed to do some contract point count work with birds in the Northwoods. Counting birds was how I got started in wildlife. As an undergraduate, my first summer technician position was doing shorebird surveys around the Chesapeake Bay area of Virginia. I loved working on islands and the beach, but I really wanted a more rugged field experience. So, I eventually ended up doing bird survey work in the Southern Appalachians for my first round of graduate school. I fell in love with warblers in those hills. My second round of graduate school and parts of my post-doc involved survey work with birds in the Piedmont and Coastal Plain of North Carolina. There, I fell in love with northern bobwhites. Then, I got a "real job." I want to be clear that I totally love my vocation as a Professor of Wildlife at UWSP. One aspect of this job is that I spend WAY more time helping others plan studies and analyze their own data. I find that helping others with analysis is one of the most fulfilling aspects of my vocation, but I had apparently forgotten about what got me into wildlife in the first place. Since taking on the contract work, I've spent more time away from the desk and on the trail. I can't believe what I was missing for the past seven years. A few days ago I spent an evening birding and got the best look at a handsome Chestnut-sided Warbler singing and preening himself in a young trembling aspen. He was stunning. Why haven't I been watching Chestnut-sided Warblers preen and sing for the last seven years? I guess I could list the reasons, but I'd rather quit typing and get outdoors. I hope you already left this page and did the same...

Wanted: Board Member Candidate for North Central Section Elections

Submitted by Jason Riddle, President

Dear Membership,

Elections for the North Central Section Board will be upon us soon. There is great interest in recruiting someone from our state chapter to run for a board position. One of the primary reasons for recruiting from Wisconsin is that the Midwest Fish and Wildlife meeting will be in WI in 2018. The Section will be better positioned to engage and benefit from the meeting if we have some locals in the mix. Wisconsin presence with the Section already is on the uptick. One of the two new student representatives on the Section Board is our own Lisa Zoromski from UWSP. However, her term ends at the end of the coming academic year.

Help us continue to enhance our WI presence and please consider running for a position! Most North Central Section Board positions are two-year commitments with the exception of President-elect or Treasurer (which are three-year commitments).

Please let me know as soon as possible if you have any questions, as the Section would like to have a list of potential candidates rather quickly.

Cheers, Jason

Executive Board Meeting Conference Call Minutes

May 26, 2016, 9am

By Carey Strobel, Secretary/Treasurer

Attending: Mark Pfof, Derek Johnson, Jason Riddle, Lesa Kardash, Carey Haralson-Strobel, Mandy Kamps, Lisa Zoromski

- 1) Update on pesticide matters
 - North Central Section (NCS) is seeking input from state chapters on neonicotinoids and other potential pesticides of concern influencing pollinators. National TWS asked the NCS to collect information from their respective states.
 - The Board will consult with experts in our chapter and pass on the appropriate information to the NCS.
- 2) Search for a NCS Board Member
 - Congratulations to Lisa Zoromski as a new Section Student Representative.
 - NCS would like to see more WI representation for the Midwest FW Conference in 2018.
 - Jason recommends sending out a broad recruitment request.
 - Lesa Kardash stated we should contact people specifically for involvement. A statement will be placed in IT as well.
 - Jason will write a recruitment letter. Try to gather information on what role this person would play in the MWF 2018 meeting.
- 3) Update on Strategic Planning Committee (SPC)
 - Board determined that a Strategic Planning Process is necessary before decisions are made on how we invest/reinvest Chapter funds
 - Jason talked with Brad Strobel and will be polling current members on how we are doing on our current objectives. There is no need to change our current objectives.
- Names of the SPC
 - Jon Olson
 - Lisa Zoromski
 - Tami Ryan
 - Shelli Dubay
 - Brad Strobel
 - Jason Riddle (board member liaison)
 - Timeline for current action: Mid-August will have a survey out to the board for approval/suggestions and then sent out to membership on September 1, then on October 1 would compile responses. By October 15 present the board with a summary of their findings.
 - Members who are comfortable might not respond. We would like to get 2/3s of the membership to respond. Try to move things ahead by not giving members 1 month to respond. Try to get results in September.
 - Possibly provide an incentive to membership, free membership and registration to winter meeting.
- 4) Fall Technical Training (please review emails from John Olson)
 - Trapping Matters: late summer or early September (Saturday September 10?)
 - Two options for fall training: set it as an independent event, or have it in conjunction with the WTA Rendezvous in Marshfield.
 - Agree that having it in conjunction in Marshfield sounds best, but needs to be discussed with Jon Olson to iron out the details.
- 5) 2018 Midwest and 2017 Winter Meetings
 - Milwaukee has been selected as the MWF Conference, possibly the Hilton.

- Hosts our joint meeting there next year: Feb 28 -March 2, 2017 is available
- Make sure this info is correct. We need to lock in these dates. Contact President of WI AFS. Should focus on the upcoming winter meeting, get a theme set. Meet with WI AFS.
- Jason: there is not much communication between Fisheries and Wildlife DNR persons for the Midwest Conf.
- Lesa: We can't do much about MWF Conf. until we find out who is leading this from DNR Wildlife. In the past the Chapter steps up at the end to help out with registration or filling in as needed.

Issue Committee Updates

Deer Issues Committee

Although the committee has retreated into remission at the present time, we have added Dr. Scott Hygnstrom (UWSP) to our group. There are at least 8 burning deer issues that should receive attention when the timing is better. We look forward to Scott's contributions.

Keith McCaffery, Acting Chair

Forestry Issues Committee

Since the Winter Meeting of the Wisconsin Chapter, the Silviculture Guidance Team (SGT) has been involved with possible Silviculture Handbook changes to aspen rotation ages, red pine plantation rotation ages, northern hardwood selective cutting, and very importantly, the results of the Legislature's \$625,000 Forest Practices Study. All proposed changes in forest management prescriptions are currently under review by a series of SGT ad hoc committees and at Council of Forestry meetings. The National Council on Air & Stream Improvement (NCASI), a pulp and paper industry organization, held their

annual northern meeting in Wausau with a two-day forestry session on the preliminary results of the large Forest Practices Study.

I represented The Wisconsin Chapter and wildlife habitat considerations at SGT committee meetings at Stevens Point (two meetings), Tomahawk (two meetings), and Antigo as well as Council on Forestry meetings at Madison and Stevens Point. I attended the two day NCASI Forest Practices Conference at Wausau. All this activity is leading up to possible silviculture handbook and forest management policy changes that would impact wildlife habitat in forests.

Ron Eckstein, Chair, Rhinelander

Wildlife Damage Issues Committee

Court Rules Against DCCO Depredation Orders - A District Court judge recently ruled against the U.S. Fish and Wildlife Service (FWS) in a case regarding the extension of two double crested cormorant (*Phalacrocorax auritus*) depredation orders. The case, brought forth by the Public Employees for Environmental Responsibility (PEER) against the FWS, argued that the FWS failed to follow the National Environmental Policy Act (NEPA) when it extended the Depredation Order For Double-crested Cormorants at Aquaculture Facilities (50 CFR 21.47) and the Depredation Order for Double-crested Cormorants to Protect Public Resources (50 CFR 21.48). These orders, originally issued in 1998 and 2003, respectively, allowed aquaculture producers in 13 states to kill double-crested cormorants if they were committing or about to commit depredations on aquaculture stocks, and further allowed state and federal agencies, and recognized tribes, in an additional 11 states to kill double-crested cormorants that were committing or about to commit depredations on public resources.

In their lawsuit, PEER argued that the FWS failed to adequately conduct an environmental assessment (EA) prior to extending the depredation orders. PEER cited that the FWS used double-crested cormorant population estimations from its 2009 EA, and did not adequately consider public comments on alternative actions prior to extending the orders.

Following the ruling, the FWS petitioned the court to not vacate orders until they are able to conduct an EA, that the court finds suitable, or an environmental impact statement (EIS), a self-estimated 7 month period. The FWS argued, in their petition, that vacatur of the orders could cause environmental and monetary damages, pose an administrative burden on the FWS and state agencies and tribes, and disrupt the activities of the affected industry and entities. The judge found that the evidence of monetary and environmental damages was vague and unclear. The judge also noted that the estimated time for the FWS to produce a new EA was not so long as to allow double-crested cormorant populations to significantly increase. With these findings, the judge vacated both depredation orders until the FWS conducts a satisfactory EA or EIS. The judge further denied a petition to stay the order of vacatur, citing the same justification as for the vacatur.

Student Chapter Corner

Northland College No report.

University of Wisconsin-Madison

By Danny Erickson, President

What another great year for the UW-Madison TWS student chapter! The semester ended on a high note with our annual wildlife vs. forestry club kickball game with good turnout. Although we honorably turned over our coveted Raven Trophy of Excellence in defeat, it was an opportunity for students to relax during final exams and to meet other students from a similar major. And that was really our goal—to promote the connection between two separate, yet related fields of study that are integral to the field of wildlife management.

On April, 10 members attended the North Central Section Student Conclave hosted by UW-Stevens Point in Treehaven. We were extremely impressed by the hard work the UWSP Chapter put in, not to mention the amazing locale that helped make a great and memorable experience for all those present. UW-Madison members benefitted from the many workshops, talks, and varied social events put on and claimed victory in the student-led quiz bowl! Afterwards National TWS President Gary Potts graciously stopped in Madison for lunch with a few students. We discussed the benefits of becoming a certified wildlife biologist and what it means to be a member of TWS. It was rewarding to see someone so advanced in their career show personal concern and care, giving advice as well as encouragement to the next generation of wildlife professionals.

This year's officers were elected soon after conclave. The new team combines experienced veterans and new faces to the club and I am excited to work with them over the coming year! We are currently planning for fall events,

contacting speakers, and brainstorming for our big Game Dinner for the upcoming semester. One of our big focuses is to help students new and old rediscover their passion for wildlife and to provide them with opportunities to achieve their vocation. The 2016-2017 officers are as follows:

President: Daniel Erickson
Vice President: Spencer Keyser
Secretary: Kristina Kennedy
Treasurer: Valerie Knurr
Web Master: Angela Ingrassia
Outreach: Siena Muehlfeld/Steven Plesh
Marketing: Rhianna Miles
Social Coordinator: Eric Hammerer

Even with school out, our members have been very busy this summer! Former president Lucas Olson led a group of students to Clam Lake in northern Wisconsin to assist elk biologists deconstruct an elk acclimation pen. The fencing material will be reused to expand existing pens to house the arrival of elk from Kentucky to bolster the Wisconsin population. A special thanks to Laine Stowell and his family for their hospitality and home cooked meals during our stay! In May, chapter members assisted graduate student Regan Dohm conduct raptor surveys to help determine the impacts of wind farms on

these particular birds. It was a fine day of birding where members increased their accipiter identification skills and wrestled with ideas of how to mitigate this human-wildlife conflict. Students are also actively engaged in the WDNR Frog and Toad Survey, with the first survey completed in late March and continuing through the summer with two more survey periods ending on mid-July. By listening to frog calls along a prescribed wetland route, we help determine distributions and abundances of these amphibians in the state. In a partnership that began last fall with the UW Urban Canid Project headed by graduate student Marcus Mueller and professor David Drake, Madison TWS members tracked radio-collared coyotes and foxes in the Madison area. Part of the project aims to better understand the habits of canids in the cityscape and also to investigate how residents can coexist with their neighborhood fox. The project will continue into fall with new and old members gaining valuable telemetry experience tracking these enigmatic creatures.

Our organization will be sponsoring five students to the national conference in Raleigh, NC this October. Preparations are well underway, including finalizing the quizbowl team. Looking back, it was another semester for the books with many TWS members away starting that great summer job experience. I am eager to serve as the new president and backed by an outstanding officer team, it is looking to be another eventful year in Madison!

University of Wisconsin-Stevens Point

By Lisa Zoromski, President

My name is Lisa Zoromski, and I am truly honored to introduce myself as the new UWSP Wildlife Society President. I served as a chapter officer the past two years as Vice President and Treasurer, and I am excited to take on this new role. This year, I also serve as the Wisconsin TWS student representative. Our chapter accomplished a lot this past year.

Our 22 student led research projects contributed to over 6,000 volunteer hours. There were 14 professional speakers that presented at our TWS meetings. Members had participated and presented in 5 different conferences and 2 research symposiums. There were 20 posters presentations from TWS members just at the UWSP symposium alone. Our chapter had several educational programs for local schools, for over 330 students! Not to mention also planning the North Central Section Student Conclave.

Conclave planning started almost a year ago; which included many hours of meetings. I was surprised at the amount of enthusiasm and help our chapter brought to hosting such a large event. About 20 students volunteered to help with conclave. Volunteering included leading workshops (teamwork, wildlife

Olympics, telemetry), organizing speakers, writing sponsor letters, creating activities, budgeting, and much more. After conclave, each attending chapter contributed two votes for the two new North Central Section student representatives. I am ecstatic to say I now serve as one of the new student representatives!

Around the same time as conclave, several projects were taking volunteers out and conducting research. Ruffed grouse telemetry, rabbit live-trapping, raptor road surveys, and woodcock research were just a few. Our chapter hosted a Wild Game Feed event with the UWSP Fisheries society, where 50 students enjoyed some delicious food. Some other events were volunteering at Sandhill Wildlife Area open house, a sharp shooting course, and a Tomahawk live trap tour. Elections were held for the 10 officer/board member positions. There were a very large number of election applicants this year (16!). All were extremely active TWS members. I look forward to working with the new board and TWS members.

James Hansen- Ruffed Grouse telemetry

Wisconsin Center for Wildlife leads TWS firearm safety and shotgun shooting event.

Sandhill open house volunteer event

At the last general TWS meeting, our chapter awarded a student of the year and project of the year. Student of the year went to Eric Canania. Eric was very active in TWS being the deer project leader, presenting at many conferences, and helping with various activities since he became a member four years ago. Project of the year went to the Canid project. This project alone had 35 volunteers and 2,200 project hours. They presented at symposiums, updated objectives, and were very enthusiastic. Also, at the last meeting, Dr. Eric

Anderson had one of his last presentations at UWSP, “Rules for surviving a zombie infested world.” With his retirement, we will truly miss having his infectious enthusiasm around UWSP.

With Dr. Tim Ginnett’s promotion to Interim Associate Dean for Academic Affairs and Dr. Eric Anderson’s retirement, UWSP was in search of two new wildlife professors. After searching through a large pool of applicants, two new faculty were chosen. We are excited to welcome Robert Lonsinger and Shawn Crimmins to our university. We were also lucky to be granted a Kennedy-Grohne Endowed Chair in Waterfowl and Wetlands Conservation position, the second endowed chair position at UWSP, both chairs being in wildlife. Congratulations to Jacob Straub, our new endowed chair. UWSP now has 8 wildlife faculty!

Each year our chapter and wildlife program grow. I am truly thankful to be elected as the new president to such a great organization. I can’t wait to see what our chapter will accomplish next year.

2016 Student Conclave

Submitted by Lisa Zoromski, 2016 Conclave Planning Chair

On April 1-3rd, the University of Wisconsin- Stevens Point (UWSP) student chapter hosted the 2016 North Central Section TWS Student Conclave at Treehaven in Tomahawk, WI. There were 104 attendees from 12 chapters across 7 states. Many levels of TWS were represented at this event. Chapter members, officers, Wisconsin Chapter officers and board members, the NCS TWS past president (Mark Larson), and the National TWS president (Gary Potts) were in attendance. Conclaves are unique in the fact that they are specifically geared towards students. They provide fun opportunities to learn wildlife techniques and network.

2016 NCS Conclave group photo with Gary Potts on far right

Conclave was given a theme this year, teamwork. The UWSP student chapter collaborates annually with the Wisconsin Center for Wildlife with a leadership series workshop. A teambuilding workshop was incorporated into conclave, with 80 attendees participating. Chapters used a nominal group process to come up with ways to increase membership numbers and engagement within their own chapters. Several team building exercises were incorporated into the workshop as well. This workshop taught attendees valuable teambuilding skills which they could bring back to their chapters.

Teamwork activity led by ten UWSP students and Dr. Scott Hygnstrom through the Wisconsin Center for Wildlife.

Students had the opportunity to participate in a Wildlife Olympics activity, where they had to work as a team and were tested on field skills. Other conclave activities included quiz bowl, photo contests, nature photography, wolf howling, telemetry, and tie dying conclave t-shirts. There were several speakers from many different wildlife agencies that volunteered their time to present at conclave as well.

UWSP Wildlife Olympics team being tested on their forestry skills.

Ten chapters competed at the conclave quizbowl, led by the UWSP liaison, James Hansen. Congratulations to UW-Madison for being the quiz bowl champions!

This event couldn't have been as successful as it was without the help of over 20 dedicated UWSP conclave planning committee members, 20 wildlife professionals, and 17 sponsors. Conclave created an excellent way for UWSP to provide additional leadership opportunities for members. UWSP viewed conclave as a huge success from increasing chapter involvement through leadership roles within their chapter, to increasing communication between chapters. UWSP really enjoyed hosting this event, and hope other students will benefit from the skills they gained at conclave.

North Central Section – The Wildlife Society Update

Submitted by Chris Newbold, 2016 NCS President

The Executive Board of the North Central Section (NCS) has been busy this year working to increase the services provided to our members. The Section continues to support and recognize the outstanding work that our members accomplish. We are currently soliciting nomination for the Outstanding Wildlife Graduate and Undergraduate Student Awards and the Professional Award of Merit. The NCS also works to develop nominations of Section members for TWS Fellows Awards. If you have a student or professional in mind that you think should be recognized for their outstanding work and commitment to the wildlife profession, you should consider contacting one of your NCS Board Members and developing a nomination for one of these awards.

Providing quality professional development and continuing education opportunities to our members is a chief priority of the current Executive Board of NCS. Currently, the Section is busy working on the 2017 Leadership Series training which is planned for the upcoming Midwest Fish and Wildlife Conference in Lincoln, Nebraska. This planned workshop is sponsored by both the Section and the Midwest Association of Fish and Wildlife Agencies (MAFWA) and is focused on providing leadership training to natural resource

professionals ranging from students to seasoned professionals. Please look for more information in the coming months regarding this workshop and plan to participate with us in Lincoln.

The Section is also taking an active role in TWS's Conservation Affairs Network by increasing communication, soliciting input and coordinating with national, section and state chapter representatives on wildlife policy issues that impact many of our members. Several NCS Chapter members have stepped up to leadership roles to represent the Section on such matters as gray wolf delisting in the western great lakes region, feral hog control in the North Central Section states, and future funding in for fish and wildlife conservation. If you have a local or regional conservation issue that you think the Section should consider, contact one of the North Central Section Executive Board members.

Service to its members is the primary function of any lasting organization and the North Central Section of The Wildlife Society is working hard to increase the service we provide to our members. We ask for your help – get involved with the Section and help us find new ways to provide service to you.

Alexander von Humboldt (1769 – 1859)

Submitted by Chuck Pils, Member

Born: Berlin, Germany

Education: University of Gottingen

Career: Geographer, Explorer, Botanist, Zoologist, Ecologist, Naturalist, Geologist

- Became friends with literary giants like Goethe, mixed with scientists like Darwin, Cuvier, Lyell, & LaPlace; Emperor Napoleon and future revolutionaries like Simon Bolivar
- Stated that the world was a single, web-like, interconnected organism

- Was an outspoken foe of slavery

1799- 1804

- * With aid of large inheritance, journeyed to South America with friend Aime Bonpland; mapped & collected in Amazon, northern Andes, climbed most of Mt. Chimborazo in Ecuador (21,000 ft. highest recorded mountain at the time)
- * Traveled through South America, Cuba and Mexico
- * Visited with Jefferson in U.S.-Both avid scientists
- * Served as an inspiration for Darwin & His voyage on the Beagle
- * Inspired Thoreau to weave science and poetry into one thick strand

1804 to 1862

Von Humboldt sailed to Paris in 1804 and wrote thirty volumes about his field studies. During his expeditions in the Americas and Europe, he recorded and reported on magnetic declination. He stayed in France for 23 years and met with many other intellectuals on a regular basis.

Von Humboldt's fortunes were ultimately exhausted because of his travels and self-publishing of his reports. In 1827, he returned to Berlin where he obtained a steady income by becoming the King of Prussia's advisor. Von Humboldt was later invited to Russia by the tsar and after exploring the nation (from May 20-November 13, 1829 travelling 10,000 miles using 12,244 horses) and describing discoveries such as permafrost, he recommended that Russia establish weather observatories across the country. The stations were established in 1835 and von Humboldt was able to use the data to develop the principle that the interiors of continents have more extreme climates due to a lack of moderating influence from the ocean. He also developed the first isotherm map, containing lines of equal average temperatures.

From 1827 to 1828, Alexander von Humboldt gave public lectures in Berlin. The lectures were so popular that new assembly halls had to be found due to the demand. As von Humboldt got older, he decided to write everything known about the earth. He called his work *Kosmos* and the first volume was published in 1845, when he was 76 years old. *Kosmos* was well written and well received. The first volume, a general overview of the universe, sold out in two months and was promptly translated into many languages. Other volumes focused on such topics as human's effort to describe the earth, astronomy, and earth and human interaction. Humboldt died in 1859 and the fifth and final

volume was published in 1862, based on his notes for the work.

WRITINGS & INFLUENCES

Kosmos: A Sketch of the Physical Description of The Universe
Voyage to the Equinoctial Regions of the New Continent
Personal Narrative
Natugemalde

Von Humboldt greatly influenced George Perkins Marsh who predicted bleak future of natural world, as did James Madison. Ernst Haeckel formulated the term "Oikos" or Ecology from Humboldt's writings. John Muir carried Humboldt's books with him....developed the concept of Protectionism.
