

GIS in Wildlife Ecology

Special Poster Session

*The Wildlife Society, 27th Annual Conference
Louisville, Kentucky, September 27 – October 1, 2020*

GIS and spatial analysis is becoming more and more integral to wildlife management and research. The field is mature enough to have produced powerful methods and tools, but young enough that we are constantly finding new ways to apply those tools. **This is a golden age for spatial ecology and we are right on the cutting edge!** This poster session will illustrate innovative and exciting examples of GIS and spatial analysis applied to wildlife research and management.

Have you been working on a project that demonstrates clever, innovative, or particularly effective examples of GIS, spatial analysis, or telemetry in wildlife management or research? If so, **we want to see it!** This poster session gives you a venue to show your work to your peers.

Abstracts Due Friday, May 1, 2020!

Please send your poster title and abstract (less than 300 words), directly to the Spatial Ecology and Telemetry Working Group officers:

Jeff Jenness – jeffj@jennessent.com
Alex Wolf – awolf@scenichudson.org

Kathy Zeller – kathyzeller@gmail.com
James Sheppard – spatialecologist@gmail.com

Note: Submission to this special poster session is separate from the standard conference abstract submission process. Please send your abstracts and poster titles directly to the working group officers listed above. Please do **not** submit identical posters that you plan to submit to the general conference. However, you may use this poster session to create a separate poster describing the GIS or telemetry aspects of your project.

Prizes will be awarded for the Best Posters!

Including Mark Monmonier's classic "How to Lie with Maps", and Edward Tufte's "The Visual Display of Quantitative Information", and possibly more, depending on what we can round up!

We are limited to 15 posters! Please submit your abstract soon so we can select the finalists. We will let all submitters know whether they are selected for this special poster session during the week of Monday, May 4. All conference attendees are invited to participate in this special poster session.
