WILDLIFE
PROFESSIONAL

‘Two-eyed Seeing’

**INTERWEAVING
INDIGENOUS
KNOWLEDGE AND
WESTERN SCIENCE**

**Using eDNA to
find the sharp-
tailed snake**

**Hidden heroes of
North American
conservation**

**A framework
for sagebrush
conservation**

FEATURES

- 28 **A Framework for Sagebrush**
A new resilience-based approach helps managers assess risks and prioritize actions
By Jeanne C. Chambers, Michele R. Crist, Jeremy D. Maestas, Karen L. Prentice and David A. Pyke
- 33 **The Hidden Heroes of North American Conservation**
Exploring pioneering women left out of wildlife history
By Winifred Kessler and Selma Glasscock
- 38 **A Roadmap Through a Changing Landscape**
The Relevancy Roadmap offers state agencies strategies to reach a broader constituency
By David Frey
- 42 **Gray Ghosts and Fire**
Can efforts to restore the northern goshawk renew the fire-prone forests they inhabit?
By Richard T. Reynolds, Douglas A. Boyce Jr., and Russell T. Graham
- 48 **Searching for Signs of a Secretive Snake**
Using eDNA to find — and protect — the cryptic sharp-tailed snake
By Laura Matthias and Carrina Maslovat
- 52 **Cooperative Conservation Efforts Take Off**
A new monarch butterfly plan is the latest large-scale, collaborative habitat conservation effort for at-risk species
By Lindsay Martinez
- 57 **From Tiny Pathogens to Big Data**
Symposia abound at TWS' Annual Conference
By David Frey

Erratum

In Volume 14.3, our cover article on urban wildlife incorrectly reported that Colorado's black bear populations are increasing. The data show that while conflicts with humans are increasing, bear numbers are declining. We regret the error.
