- Alberta Big Game Advisory Board (2011-2015), ACTWS representative; reviewed AB policy for large mammal management for scientific quality.

Principal Professional Interests

Ungulate foraging & trophic ecology, predator-prey interactions, disease ecology, and professional diversity, inclusion & equality.

Views: Limit of 250 words.

First, I give kudos to the Canadian Section Board of Directors for an efficient job in establishing their Incorporation, TWS Affiliation, and Charitable Status, and facilitating Canadian Chapters' options for TWS Affiliation in the last few years. We still have our work cut out to establish a well-integrated Canadian TWS where Section and Chapters have a framework to support each other. Second, with our house in order, we need to continue to strengthen Canadian perspectives in TWS. Not only do we have distinct ecosystems, but our cultural and political systems afford unique challenges and solutions. Since coming to Canada 21 years ago, I remain in awe of the vast but fragile Canadian wildlife resources, the cultural diversity, and the impassioned and close-knit wildlife professionals who work to conserve them. Canada's long wildlife legacy and our experience can benefit our neighbors, but the importance of TWS Affiliation in backing our efforts is not to be underestimated. Third, as our world continues to globalize, conserving the earth's biota will depend on making wildlife relevant and foraging international collaborations. Strong international teamwork within TWS is key in meeting the future challenges. TWS has been a part of my life for the past 40 years; I have seen the opportunities The Society has offered to young and seasoned professionals alike. It is growing in terms of diversity and inclusion. I hope to help promote the synergism that Canadians bring to tackling past and emerging professional and wildlife issues head-on.
