President's Message

Fidel Hernandez - 2020 President SW Section of The Wildlife Society

I hope this newsletter finds you and your family well. I write this piece from my office on campus. Campus is quiet and mostly student free. Generally, this would not be too unusual given that it is nearing the end of the semester, students are wrapping up finals, and summer break for most students will be here soon.

However, what makes this year unusual is that it has been like this—a quiet and a mostly people free campus—since early spring. As you well know, the country began isolation measures in mid-March in response to the coronavirus pandemic. A new way of life began for all of us, working mostly from home and in isolation from the rest of the world.

It often takes times like these for us to appreciate what we sometimes view as an ordinary, routine life. In-person lectures. Conferences. Field days. Co-worker gatherings. All of these are mostly non-existent, at least in the manner we normally experience them. Even the writing of a simple newsletter article seems far removed from normalcy. Today, I write this piece, and I cherish it because it serves as a reminder of ordinary life. Here I provide a short synopsis of what has been happening in the Southwest Section in the fast few months.

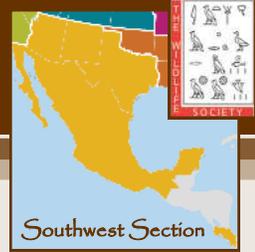

In February 2020, Past President **Tad Theimer** officially passed the torch to the new Executive Board of the Southwest Section. Serving the Section for this year is **James Cain** (President Elect), **Casey Cardinal** (Secretary), **Erika Nowak** (Treasurer), and myself (President). **Misty Sumner** and **Jamie Killian** also have agreed to continue serving the Section as our amazing newsletter co-editors. In addition, **Romey Swanson** has generously agreed to continue serving as Chair of Conservation Affairs Committee. I thank **Ryan O'Shaughnessy** from Sul Ross University who served for several years as Treasurer of the Section. Thanks to the service of members such as Ryan, Past President Theimer, and the past

President's Message (cont.)

Fidel Hernandez - 2020 President SW Section of The Wildlife Society

Executive Board, we are inheriting a well-functioning organization. Although there is not much to report since the two short months that the new board assumed the reins, there is much to highlight regarding the excellent job done by Past President Theimer and the past Executive Board.

The Section does not have an enormous operational budget given that most of our budget comes from the \$5 annual membership dues. Thus, with a membership level of about 350 members at any given time, you can estimate the general size of the Section's operational budget. However, with excellent budgeting by past Executive Boards and prudent spending, the Southwest Section was able to support several important endeavors this past year. For example, the Section financially supported several events including the Deer and Elk Workshop of the Western Association of Fisheries and Wildlife Agencies, the annual conference of the Texas Chapter of The Wildlife Society (TWS), and the national conference of TWS in Reno, Nevada. In addition, the Section co-sponsored the first annual Out-in-the-Field luncheon at the national TWS conference that was hosted to support LGBTQ+ wildlifera. The Section also awarded its second annual Student Research Scholarship (\$500) to **Brittany Schweiger**, a Master of Science student from New Mexico State University. As part of the Section's continuing support of TWS certification, it also approved offsetting 75% of certification cost of an application to become an Associate Wildlife Biologist for graduate student Daniel Wilcox from Sul Ross State University.

Although financial support is an important component of the Southwest Section function, it also supports in non-financial ways members or chapters in their professional endeavors. For example, the Southwest Section nominated member **Sarah Fritts** from Texas State University to serve on the TWS Certification Review Board. In addition, the Section approved the formation of a new student chapter at University of Texas San Antonio. Perhaps one of the most exciting endeavors the Southwest Section supported was offering operational insight and advice to **Raul Valdez**, Professor

President's Message (cont.)

Fidel Hernandez - 2020 President SW Section of The Wildlife Society

Emeritus of New Mexico State University, and Luis Tarango-Arámula of the Colegio de Posgraduados San Luis Potosí Campus in their hosting of the 2nd National Conference of Wildlife Management and Conservation in Mexico.

Both Raul and Luis have been instrumental in leading the charge to organize wildlife professionals in Mexico, and there presently is great interest from Mexican biologists to form a Mexico Chapter of TWS. There has been a perennial interest for greater engagement of Mexico in TWS; however, past efforts have failed for one reason or another. Today, the timing appears right, and Raul and Luis are leading the charge. Such a chapter would operate under the umbrella of the Southwest Section, and thus we are excited to continue working with Raul and Luis to capitalize on this excitement and explore the possibility of a Mexico Chapter.

The past few months have been anything but normal in light of the national pandemic. However, Southwest Section has not missed a beat during this time. The transition from 2019 to 2020 has been a busy one. I extend my heartfelt thanks to Past President Tad Theimer and the past Executive Board for their dedicated and tireless service to the Section. I particularly thank Tad for his generous insight and help as I began my year as President.

Thank you for this opportunity to serve as your President. I look forward to our next year!

Until next time,

Fidel Hernández

Southwest Section Tracks

Jim Ramakka, Southwest Section Representative To Council

Life has changed significantly since The Wildlife Society Council held its Spring meeting in Omaha on March 8 and 9. While the COVID-19 situation was a topic of conversation at the meeting and the following North American Wildlife and Natural Resource Conference, I don't know that any of us fully realized the impact the pandemic would have on our lives and those of our friends and families.

At the start of our meeting, CEO Ed Thompson presented Council with an update of FY20 budget and investment fund balances through Dec. 31, 2019. TWS ended the year in a strong financial position with a budget surplus as a result of higher than expected attendance at the Reno meeting and actual expenses being lower than expected. Several large donations and bequests from members and good investment performance also contributed to the surplus.

Volatility in the financial markets and the potential impact to TWS investments were a topic of considerable Council discussion. TWS has taken a relatively conservative and balanced fiscal approach in recent years and it was decided not to change the current investment strategy. The Permanent Reserve Fund contains enough funding to provide a safety net for 6 months of operations should a worst-case scenario occur. Since our Spring meeting several bequests from non-members and an increase in a projected bonus from our publisher generated unplanned income which has further helped buffer the budget outlook. The private donations, in addition to existing bequests from members, are particularly heartening. TWS CEO Thompson made a point of attributing donation of those funds to the outreach efforts by TWS staff in raising the public profile of TWS and inspiring the general public to support science-based wildlife conservation.

Jim Ramakka, Southwest Section Representative To Council

Other than a downturn in the return on TWS investments as a result of the pandemic's impact on the economy, another major budget concern is the potential loss of deposits should the situation require cancellation of the Annual Meeting scheduled to be held this Fall. TWS staff and the Council Finance Committee are closely monitoring the situation and are preparing for all possible scenarios. At this time, the conference is still scheduled. Members will be notified of updates as they occur.

Council has also been made aware of the potential impacts to recruitment and retention of members and will be examining options to help members facing financial hardship retain their TWS membership.

Other topics on the Council agenda in Omaha included:

- Western Section concerns related to the Annual Meeting scheduled for Louisville as well as potential future locations in states which appear to have discriminatory laws or regulations. California and five other states ban the use of state funding for employees, including university employees, to travel to such states. TWS President White is working with other members of Council to further clarify TWS anti-discrimination and "All are Welcome" policy in the venue selection process.
- Conference planning is a 3-year long process requiring negotiations with hotels and vendors to ensure best available rates to keep registration costs as low as possible. As much as possible, the planning process attempts to consider members concerns. The 2021 TWS Annual Meeting is scheduled for Baltimore MD, while 2022 meeting will be in Spokane WA.
- Developing a structure for applying for Council Action Fund funding was discussed and will undergo further committee review.

Jim Ramakka, Southwest Section Representative To Council

- Council members agreed there is a need for increased coordination with the Native American Fish and Wildlife Society. Vice President Gordon Batcheller continue outreach efforts to NAFWS and will explore interest in organization becoming a TWS Conservation Partner.
- A list of outstanding nominations for the TWS Fellows Award and Group Achievement Award was reviewed and voted upon. Results will be officially announced before the Annual Meeting.
- CEO Thompson reported on alternatives regarding the present TWS Headquarters building in Bethesda MD. Leasing different office space closer to Capitol Hill is prohibitively expensive. Retaining the existing office space will be a continuing expense of approximately \$50,000 per yr. Sale of the larger portion of the existing office space while retaining a smaller workspace in the building would reduce owners' association fees considerably and net TWS a profit on the sale. Those funds could then be added to existing accounts or investments. Council authorized TWS staff to continue pursuing formal appraisal and assessment of potential buyer interest.
- After 2 days of discussion and adjustments, the FY21 Operations Plans and Budgets were approved.

Jim Ramakka, Southwest Section Representative To Council

Detailed minutes of the Spring 2020 Wildlife Society Council meeting will be published on the TWS website. Council will have a conference call in July where we will discuss progress and evolving issues.

Finally, the Wildlife Policy and Communications Staff at TWS continues to do an excellent job of tracking and commenting on proposed regulatory changes and federal agency budgets. The most recent of these activities has included TWS co-signing, along with 160 other organizations, a letter sent to the World Health Organization and the UN Environment Program requesting a strong but measured approach to coordination and oversight of the global wildlife trade/wet markets in response to the Covid-19 crisis.

Uncertainty is going to be the rule of the day for the immediate future as the economic and policy effects of the present crisis continue to evolve. Input from the wildlife profession continues to be important as the inevitable debates surrounding plans for economic recovery develop. I encourage everyone to stay engaged personally and professionally and to stay safe.

Please feel free to contact me with any questions or comments.

Brittany Schweiger - 2020 Recipient of SWS TWS Graduate Student Scholarship

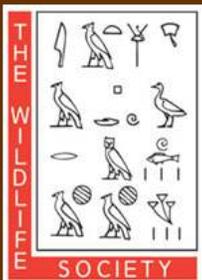

Life at the limit: the Organ Mountains Colorado chipmunk

My research has focused on understanding the ecology of the rare, endemic Organ Mountains Colorado chipmunk (*Neotamias quadrivittatus australis*). This chipmunk is a subspecies of the wider-known Colorado chipmunk (*Neotamias quadrivittatus*), which is found throughout Colorado, Utah, and northern New Mexico. The Organ Mountains Colorado chipmunk resides in the small, isolated range of the Organ Mountains, with limited coniferous forest habitat. As a population at its southern range limit, the Organ Mountains Colorado chipmunk is facing threats such as habitat loss due to climate change. Despite its status as threatened by the state of New Mexico, there has been limited information published about the subspecies. Thus, my goals have been to understand habitat selection and activity pattern by this charismatic creature.

We have learned about this chipmunks' habitat selection by conducting a radio telemetry study. We captured 21 individuals and attached small VHF radio transmitter collars. We located collared chipmunks and collected detailed field and GIS-based habitat information to assess selection. Unlike their Colorado counterparts, we did not find strong associations with coniferous forest, which we had predicted. Instead, we have found that these chipmunks are associated with the arroyos, or steep-sided drainages, that provide ephemeral water and relief from the arid conditions of this southern mountain range. As our climate continues to warm and the severity and duration of droughts and risks of wildfire increase, we suggest that these riparian corridors will become imperative for the persistence of these chipmunks.

Student News (cont.)

Brittany Schweiger - 2020 Recipient of SWS TWS Graduate Student Scholarship

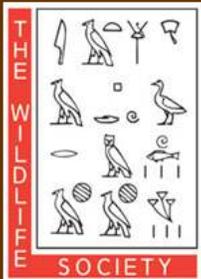

In addition to the radio telemetry study, we have deployed remote cameras across the study area for the last year to monitor chipmunk activity across the seasons. Our research suggests that these chipmunks are limited by maximum daytime temperature, with their lowest activity occurring during the dry, hot period in June. Conversely, their peak activity occurs in the cooler, slightly wetter months of March and November. This differs from what we know about chipmunk life history in that peak activity and reproduction generally occurs in late spring, with reduced activity around winter. From our remote camera capture, we have been able to understand driving factors in chipmunk activity that can have potential dire consequences to their fitness. Research will continue with a range-wide occupancy study that will hopefully better inform the status of the population.

My goals after defending my Master's this summer are to continue my education in a PhD program in the near future. I would like to continue researching the impacts of climate change on species. I am hugely grateful to be a recipient of the Southwestern Section's graduate student award. I would like to thank the scholarship committee and all those involved with the award for recognizing my hard work and the value of this research for a species of conservation concern.

State News; Arizona

Andrew Jones, President of the Arizona Chapter of The Wildlife Society and Terrestrial Research Program Manager, New Mexico Game and Fish Department

When I was asked to provide an overview on the recent comings and goings of the Arizona Chapter of the Wildlife Society (AZTWS), I figured it would be easy to provide a quick update. However, once I sat down to write I realized that our recent Chapter activities are less about what we have done and more about what we planned, then cancelled. Maybe I should have seen that coming given what Robert Burns said about the best laid plans.

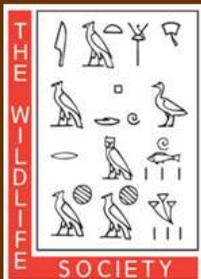

Nonetheless, the most recent Chapter event was the 53rd Joint Annual Meeting of the Arizona/New Mexico Chapter of the Fisheries Society, Arizona Chapter of the Wildlife Society, and New Mexico Chapter of the Wildlife Society, which was held in Prescott, AZ. The Arizona and New Mexico Chapter of the American Fisheries Society did a fantastic job of planning and organizing the JAM. As usual, the event was a great success and well attended by students and professionals alike. The presentation and poster sessions were fantastic, with a total of 54 presentations and 31 poster abstracts accepted this year. We also presented four Chapter awards as part of the JAM banquet. We presented the WILDHARE Award to Maria Altemus for her contributions in the applying habitat principles to the management of jackrabbits in Arizona. We presented the Professional Service Award to the Arizona Game and Fish Department Rapid Frogs Program (Tom Jones, Audrey Owens, Christina Akins, Cody Mosely, and Maddie Marsh) for their outstanding contributions to management and conservation of wildlife, as well as to recognize their professional work standards and conduct. Sue Boe received the Doug Morrison Award, for her significant contributions to the management and conservation of wildlife in Arizona. The final AZTWS award was the David E. Brown Lifetime Achievement Award, which recognizes an individual for his or her accomplishments in wildlife

biology and management over their lifetime. The Lifetime Achievement Award was presented to Randy Babb. Randy is a dedicated and accomplished biologist, naturalist, educator, mentor, advocate, author, and artist.

Generally, the next Chapter event of the year after the JAM is our yearly wildlife techniques workshop, which we host in mid-April. At this workshop, participants have the opportunity to become familiar with field techniques common to the wildlife field, including orienteering, telemetry, and live-trapping methods, as well as the opportunity to network with Arizona biologists. However, we cancelled the techniques workshop due to the COVID-19 pandemic. Like many other organizations, we are watching if and when it becomes feasible to host workshops, after which we will determine whether to host the event in the fall. Similarly, we cancelled plans to sponsor a

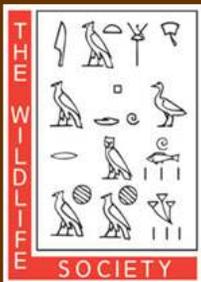

screening of the film Deer 139 <https://deer139film.org/>. Our intent with this event was to help Arizona student chapter raise funds. We are still considering carrying forward with a screening of this film to help our student chapters, albeit when it is safe and prudent to do so.

Andrew Jones presenting Randy Babb the David E. Brown Lifetime Achievement Award at the 53rd Joint Annual Meeting. Photo courtesy of Jessica Moreno.

Recently, the Chapter established an appointed bio-blitz committee, which is chaired by Scott Sprague. The intent of this appointed chair position is to

partner with organizations planning bio-blitz efforts, and help those organizations with volunteer recruitment, necessary equipment, and professional expertise. We are cautiously optimistic that we may be able help plan and participate in some bio-blitz efforts in the fall.

Southwest Section News

State News; Arizona

Andrew Jones, President of the Arizona Chapter of The Wildlife Society and Terrestrial Research Program Manager, New Mexico Game and Fish Department

We have recently updated our membership portal using the Member Planet software. This move is helping us to keep a consistently updated membership roster and remind members of their dues. Related to membership, we are also considering a "pay-it-forward" recruitment drive. The intent of this drive would be for AZTWS members to sponsor a student or new professional for an AZTWS membership for 1 year.

As president, I would like to see more engagement on the membership side, and I think this might be an effective recruitment tool. If you are interested sponsoring a membership for 1 or more students, please let me know! Finally, the Chapter still offers 6, \$500.00 (\$2,500 total) continuing education grants per year. So far year, we have awarded 1 grant to Brianna Russo, who is a graduate student at Arizona State University in the lab of Dr. Jesse Lewis. Brianna's thesis is focused on habitat selection by mule deer at the urban interface of Phoenix, and Brianna is aiming to understand how recreational activities may influence mule deer space use patterns. I believe one of the things AZTWS does best is provide support to students, and our continuing education grants are a perfect example of these efforts. If you, or someone you know, are looking for funds to pay tuition, travel to a conference, or any other continuing education activities, you can find the details at <https://aztws.com/resources/continuinged/>.

Where's Reed Sanderson?

The 2015 winner of the Southwest Section's Roger Bumstead Lifetime Achievement Award and 2013 TWS Fellow, **Reed Sanderson**, has been a fixture of the Southwest Section for a very long time and rarely missed a New Mexico/Arizona Joint Annual Meeting. Conspicuously missing from this year's JAM, we tracked him down and asked him to catch everyone up on what's going on in Reed's world. ~ MLS

Milwaukee, Wisconsin
Photo courtesy Misty L. Sumner*

Hello My Friends in the Southwest Section. This is not the usual item you see in our newsletter. However, I wanted to tell my SW Section friends and colleagues why I rather suddenly disappeared. It is not what I would have selected to do — but it happened.

I was having some problems with low energy and trouble catching my breath due to a flappy heart valve that was not pushing my blood from my heart and through my lungs. I was scheduled to get tabs placed on my valve when my wife suddenly left this world. She was in the hospital for about 7 weeks receiving palliative care for stage 4 cancer that added to my stress.

Reed Sanderson *continued*

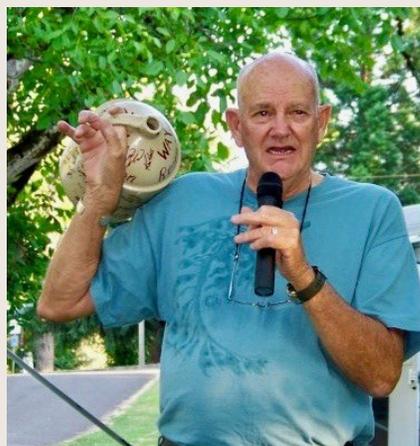

When I checked in for surgery, I was diagnosed with a blood infection and pneumonia. I was treated for those issues and the surgery was delayed for about 8 weeks. The surgery went well, but pneumonia came back. I spent about all last summer in and out of the hospital and came out unable to walk, my speech was strange, and I had no energy! My son and his wife were with me all that time taking care of me when I was not in the hospital. When I finally got home in mid-September, I was invited to join them in Salt Lake City. And so here I am!

With the help of University of Utah Hospital doctors, I am recovering. I am walking with a cane, I have recovered some of my energy, and I can breathe. I will eventually move into a senior living facility. The COVID-19 virus has put a real cramp into getting physical therapy, doctor visits are virtual, and visiting senior living facilities is impossible.

And so my friends, I am now living in Salt Lake City with my son and his wife, and being very well taken care of. Unfortunately, I have left behind so many friends in Arizona, New Mexico, and Texas. I enjoyed living in Arizona for 20 years and truly became a lizard — I liked the warm desert climate. I still do. I will miss the annual JAM meetings and seeing your smiling faces. If any of you pass through Salt Lake City, give me a call at 520-288-0280. It would be a pleasure to visit with you.

Cheers my friends — stay healthy, stay positive, and stay *negative!*

In Memoriam

Alec D. Ritzell · 1994 — March 9, 2020

Alec D. Ritzell, a graduate student at Texas A&M Kingsville and TWS member, died March 9, 2020, after a seven-month battle with brain cancer. He was 25.

Ritzell was born in Denver in 1994 and grew up in Colorado and Texas, where he developed a love for the natural world. He graduated with a bachelor's degree from Sul Ross State University in Alpine, Texas, before pursuing his master's degree at Kingsville, where he was studying Northern bobwhite quail.

Ritzell had research assistantships and internships at the Borderlands Research Institute, the Noble Foundation, the Rolling Plains Quail Research Foundation and the Caesar W. Kleberg Wildlife Research Institute.
