Using dragonfly larvae as biosentinels on protected lands

Protecting vulnerable turtles from predation

Yellowstone is 150 years old—and better than ever

Chemical Reactions

Wildlifers grapple with contaminants' toxic legacies

Contents
May/June 2022

Vol. 16 No. 3

FEATURES

- 26 **Spotting the Problems for Great Lakes Turtles**
Wildlife Services and partners reduce predation on vulnerable reptiles
By Anthony M. Hoffman, Caleb T. Wellman and John W. Hartmann
- 31 **Anti-Predator and Anti-Science**
Politically driven carnivore management in Idaho and Montana should worry wildlife professionals
By Christopher Servheen
- 36 **A Quest for Dragonflies to Uncover an Invisible Threat**
A unique project uses dragonfly larvae as biosentinels for mercury bioaccumulation on protected lands
By Jennifer Wilkening, Madeleine Locher, Colleen Flanagan Pritz, Sarah Nelson, James Willacker and Collin Eagles-Smith
- 43 **A Framework to Fight CWD**
Advancing CWD data management, mapping and surveillance
By J.R. Mason, Sonja Christensen, Colin Gillin, Paul R. Johansen and Krysten Schuler
- 49 **150 Years Old, and Better than Ever**
Since its founding in 1872, Yellowstone has been a landscape of change
By David Frey
- 54 **A Giant Loss**
Losing sequoias could be a blow to Sierra Nevada birds
By Rodney B. Siegel and Robert L. Wilkerson
